

SG Revolution tyres chosen for the new JCB 550-80

The recent launch of JCB's highest capacity telescopic handler to date, the JCB 550-80 Loadall, has delighted tyre distributor, ITWS, who has been selected as a fully approved supplier for the Wastemaster version of the machine.

Customers can now specify SG Revolution super cushion solid tyres as part of the build specification following a series of exhaustive tests by JCB Engineers. The tyres, which completely eliminate the risk of punctures, are ideal for machines working in arduous working environments such as recycling, waste and demolition and offer the customer peace of mind that their machine runs no risk of downtime due to flat tyres.

ITWS believes this is a huge step in the right direction;

“The agreement to factory fit SG Revolution tyres as one of the options on the new 550-80 WM is good news all round. It makes complete sense for us to deliver the tyres to JCB as part of the assembly process and the customer has peace of mind that the tyres are a JCB approved option. If the customer opts for our Service Exchange scheme then they can also ring us when they need to renew the tyres and we will swap for a new set in just a couple of hours – ensuring minimal downtime”.

ITWS offers a range of tyre patterns and sizes to fit all brands and sizes of mobile plant and machinery. For further information please call International Tyre and Wheel Solutions Ltd on 01942 608579 or view our website on
